JUAN PEDRO SUÑER

Backend / Fullstack Developer | Information Systems Engineering Student

La Plata, Argentina | +54 9 2281 301944 | sunerjuan240@gmail.com | github.com/N3GRON

PROFESSIONAL SUMMARY

4th-year Information Systems Engineering student specializing in backend development and scalable architectures using TypeScript, Python, Java, and PostgreSQL. I stand out for integrating AI tools into the software development life cycle to accelerate delivery, applying rigorous quality control through code auditing and testing. I provide value by building reliable systems optimized for high performance and complex integrations with external APIs.

CORE COMPETENCIES

Programming Languages: TypeScript, JavaScript, Python, Java, SQL
Frameworks & Libraries: Next.js (App Router), React, Django, Flask, Spring Boot
Databases & Data Modeling: PostgreSQL, MySQL, Relational Modeling, Role-Based Access Control, Query Optimization
AI-Driven Development & Quality: GitHub Copilot, OpenCode, Prompt Engineering, Code Auditing and Review
Version Control & Methodologies: Git, GitHub (Flow, Pull Requests, Branching), REST APIs, Agile (Scrum)
Tools & Environments: Bash, Linux, VS Code, IntelliJ IDEA

PROFESSIONAL EXPERIENCE

Academic Collaborator — 2026 – Present

Facultad de Informática UNLP (Programming Languages Seminar - Python)

- Responsible for assisting university professors in resolving technical queries, grading practical assignments, and providing pedagogical support.
- Instructed a cohort of over 40 university students in programming logic, Python best practices, and version control using Git, achieving a high course pass rate.
- Optimized the grading and feedback process by standardizing evaluation rubrics, reducing response times to students by 30%.
- Evaluated code projects for 4 work teams (20 students in total), providing technical feedback focused on best practices and clean software design.

Freelance IT Technician — 2022 – Present

- Responsible for providing technical support to end-users, specializing in hardware repair, component upgrades, and OS configuration.
- Executed diagnostics, repair, and preventive maintenance of hardware and software on desktop PCs and laptops, successfully extending equipment lifespan.
- Managed the complete customer service cycle independently, from equipment intake and budgeting to final delivery and technical advising.
- Developed personal software projects (Fullstack and Backend) in parallel to strengthen technical skills, explore new architectures, and build an active portfolio.

IT Consultant & Systems Support — 2019 – 2022

Farmacia Napoli

- Responsible for daily technical support, IT infrastructure maintenance, and OS incident resolution for the pharmacy.
- Managed the company's IT equipment, ensuring 99% operational availability for billing and stock management terminals.
- Automated the maintenance and update process of the sales software, reducing operational downtime incidents by 25% during peak business hours.
- Migrated and installed new workstations and point-of-sale peripherals, decreasing the Mean Time To Repair (MTTR) for system failures to under 15 minutes.

FEATURED PROJECTS

FlareField – Space Weather Alert App

Next.js, TypeScript, PostgreSQL

- Designed and developed a real-time web application that consumes NASA (DONKI) and NOAA APIs to alert rural users and drone operators about geomagnetic events.
- Integrated an interactive map using MapLibre supporting high-speed geospatial visualization, and reduced response latency for external data queries using structured caching.
- Implemented an accelerated development flow with AI assistants, validating type coverage with TypeScript and ensuring error-free code prior to deployment.

Alquilando – Vehicle Rental Management System

Django, Python, SQL

- Designed the backend architecture and relational database model to simulate a vehicle fleet reservation and rental platform.
- Implemented business logic for availability management, user roles, and permissions, ensuring data referential integrity.

EDUCATION

Information Systems Engineering / Computer Science — 2023 – Present (4th year)

Universidad Nacional de La Plata (UNLP)

LANGUAGES

Spanish: Native | **English:** C1 Advanced (Full professional proficiency, fluent reading of technical documentation)
